EDENTULOUS PATIENTS
TREATMENT SOLUTIONS

Straumann® Dental Implant System

COMMITTED TO
SIMPLY DOING MORE
FOR DENTAL PROFESSIONALS
RESTORATION SOLUTIONS FOR ALL PATIENT REQUIREMENTS

Basic
Basic solutions: standard retentive elements hold the denture securely in place with a minimum of implants. Treatment length is short as dental lab work is minimal.

LOCATOR®
LOCATOR®-retained overdentures are specifically well-suited if different abutment heights are required and/or if the implant axes diverge up to 40°. The self-locating design of the LOCATOR® components allows patients to easily seat their dentures.

SFI-Anchor®
As an enduring attachment solution, the new Straumann® SFI-Anchor® offers an implant angulation compensation of up to 60°. The new Straumann® SFI-Anchor® is available for Tissue Level (RN) and Bone Level (RC).

Retentive anchor
The time-proven solution based on the well-established ball and socket principle with titanium and gold matrices.

Magnet
The retention concept for exceptionally easy handling and cleaning, especially suitable for compromised elderly patients.

Bar with pre-fabricated parts
The solution for immediate loading in the mandible, as recommended in the ITI consensus paper.¹

* Products might not be available in all countries.
**Advanced**
Advanced solutions: prosthetic components are individualized by the dental lab to accommodate the individual patient situation, providing better esthetics and firmer denture fit for improved comfort.

**Individualized bar construction**
Individualized bar construction that exactly accommodates each patient’s mouth situation.

**Telescopic construction**
The customizable, removable solution that feels as stable as a fixed restoration and is particularly easy to clean.
**Premium**

Premium solutions: fixed bridges offer patients the advantage of optimally mimicking the feel and function of a natural dentition.

**Fixed screw-retained bridges**

These types of bridges are fixed on the implants with screws and can be removed for professional cleaning in the dental office.

**Fixed cement-retained bridges**

Bridges that are permanently cemented onto the implants, optimally imitating the feel and function of natural teeth.
